Today's objectives

By end of class, every team has a draft pitch deck, has completed a dry run, and preparing for final report + pitch.

- **Learn the anatomy of a great 10-min pitch.**
- **Build your draft pitch.**
- **Rehearse the demo.**
- **First dry run of pitch.**

The eight slides of a 10-minute pitch

One slide per topic. Total Time: ~10 min + Q&A. Practice the transitions between teammates, not just the slides.

1

Title & Hook (30s)

Surprising fact, user quote, or single image.

2

Problem (60s)

Specific user, specific pain, specific current failure mode.

3

Solution (60s)

One sentence on slide + picture(s). What it is? Who it's for?

4

Demo (2-3 min)

The thing they'll remember. Rehearse it five times.

5

Why AI (60s)

Why this is impossible (or much worse) without AI.

6

Market & Business Model (90s)

Market size, three competitors, your edge, revenue stream.

7

Risks & Trade-offs (60s)

Top market + tech + adoption risk. Identify and Justify.

8

Ask & Path Forward (30s)

What you need: capital or talent? What will you do with it?

The demo is the one moment they remember

1

Define the workflow

In a 3-min demo, there is one highlight the audience replays later.

**Tied to the problem solved.
Choose it deliberately.**

2

Pre-load all your data

Live data demos often fail in front of investors.

Generate and have ready a backup off-line version or video demo.

3

Narration throughout

Tell them what they're watching, before, during, and after.

Don't go silent while clicking.

Slide sprint - common pitfalls

Avoid

- Bullet-only slides with no images.
- A "team" slide with everyone's LinkedIn photos.
- Generic stock photos of robots.
- 12-point body text.
- Reading from the slide.

Aim for

- One image, one chart, or one big number per slide
- Consistent color pallet and style.
- Do not read from the slides. Eye contact.
- Body text 18pt minimum, titles 32pt minimum
- **Your demo screenshots & data as supplements**

The five questions you will likely be asked

The jury can direct any question to any team member. Practice handoffs - "I'll let [teammate] answer that".

- **"Why now?"**: What changed in AI or the market that makes this possible (or urgent) in 2026?
- **"Why this and not [obvious adjacent]?"**: Defend your scope. What did you cut, and why?
- **"What's the hardest part?"**: Name your top technical or adoption risk before they do.
- **"How do you make money?"**: One sentence on the business model. Numbers if you have them.
- **"Why you?"**: What do you (the team) see, know, or have that others don't?

Today's rehearsal flow

1

Pitch Prep *60+ min*

Draft final pitch deck.
Call me over for feedback.
Minimize new directions.

2

Practice/Break *15 min*

Review demo with team.
Prepare back-up strategy.
Practice process and handoffs.

3

Pitch Dry Run *75 min*

Full class – each group must ask one (1) question of each team.

END OF DAY 4

Final deliverables – *Submit via Google Classroom*

June 3rd (Wednesday): Submit Final Prototype [*Link/Executable*] + Final Report

June 7th (Sunday): Submit Final Pitch Slides

June 8th (Monday): Final Presentations

IF NOT FINISHED IN CLASS - DUE BEFORE NEXT SESSION

Practice pitch with each other before next week. Ensure prototype is working.

Generate demo backup [Video Showing Key Features]. Submit Final Report (6/3) & Pitch (6/7).
